Rosa

This is the latest goal of our R&D efforts. It represents a substantial rethinking of the tanning technology cycle aimed at obtaining leather that is aesthetically appealing and environmentally conscious. A hide tanned without chrome and free from heavy metals, according to the provisions laid down by the standard ISO 15987. This leather decreases water consumption, use of chemicals, the pollution load and CO₂ emissions. The remaining CO₂ emissions are offset thanks to the compensation projects.
